## ABOUT SEXUAL CONTINENCE

What is sexual (amorous) continence?

An ancient oriental method that helps you explore a new kind of orgasm, leading to a peak of pleasure where there is no time limit.

**MIHAI STOIAN** - Tantra teacher

It is the message of the ancient occult sciences for solving the problem of happiness. It is the brilliant answer that science is offering to the modern man. In the case of sexual continence the orgasm is a state of endless multi-organic experiences that do not end dramatically with an explosive discharge in the case of women or ejaculation in the case of men.

**Dr. FRANCOIS PARPAIX** - Professor of Sexology, Paris

Once again I think that it is ideal for the man to preserve his seed ? the sperm, and to experience only the pleasure without discharge.

When two people begin an erotic play there are several possibilities ? either everything happens quickly, triggering the orgasm with discharge and resulting in frustration for one or both partners, or ideally, the man? keeps his sperm. There are myths of ancient times? saying that when sperm is released, a fundamental part of our own energy is lost.

**Dr. Nathan WROEBEL** - Professor, Faculty of Sexology in Paris

Nowadays it is very important to talk about sexuality because it impregnates all human relationships.

**Dr. JEAN MARIE SZTALRYDE** - psychologist, consultant analyst in sexology  
Sexuality is not dissociated from love or from the feeling of desire.

**Dr. MIRELA CHIROIU** - psychologist, sexologist

An erotic act with sexual continence can last for hours. Those who make love in this way do not feel exhausted at the end, but full of energy. Between them a constant state of increasingly intense mutual attraction and a deep feeling of fulfillment is manifested. In addition, sexual continence is the best contraceptive method: it is natural and has no side effects.

**Dr. Swami MAHALAYANANDA** - psychotherapist

Modern society is wasting energy in unnecessary actions. If people would learn sexual continence they would be stronger and more profound, more harmonious. Their love life would be much more fulfilling.

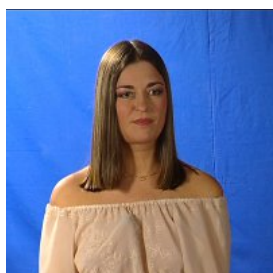

**Dr. CHRISTINA VETTERKLEIN** - psychologist

Sexual continence allows couples who practice it to achieve a state of harmony, a deep understanding of each other. It is not just a sexual game but a profound fulfillment on different levels - emotionally, mentally and spiritually.

**Dr. Monica Dascalu** - Tantra Teacher

Sexual continence is a natural way through which we can harmonize all our sexual problems.

**Gabriela Ambarus** - M.D.

During lovemaking the sexual fluids of the two lovers become effervescent, supporting the erotic states like a fuel, thus producing erotic bliss: the Orgasm.

**Dr. Doru BODEA** - Quantum physics expert - Max Planck Institute??

The latest discoveries in quantum physics show what ancient traditions have always stated: The energy is the substrate of the universe. From this perspective the matter is not different from energy. Rather, the matter represents a specific kind of energy.

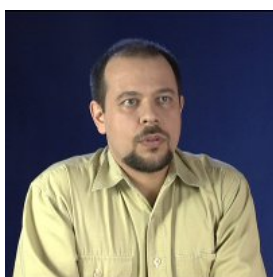

**Dr. CHRISTOPHER MONTOROLA** - quantum physics specialist - Max Planck Institute

An ancient proverb says: "Beauty is in the eye of the beholder". Brain science and especially physics confirms this truth: our mental perceptions, our mental constructions are defined, are refreshed by our perceptions. When the brain and the synapses are making this type of? connections it is indeed only your own experiences that will tell you what is good or bad, what is ugly or what is beautiful.

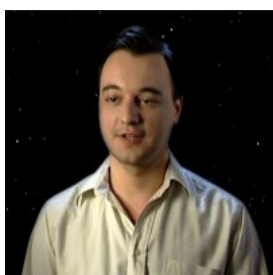

**Dr. Anatole KERNFACH** - quantum physics specialist - Max Planck Institute

The observer always affects the object that they see. When we measure something in reality, we do not realize this. However, in laboratory experiments that manipulate photons, electrons ? subatomic structures in short, the fact that the particle behaves exactly as one sees it, is verified.

**Dr. Cristian ION** - nuclear physics specialist

A single atom of our body stores a gigantic energy equivalent to 12 billion electron volts.

**Dr. Ilan Teodorescu** - medical researcher

The amount of semen that is lost in a single ejaculation contains an average of 250 to 500 million sperm cells, almost double the entire population of North America. In other words one single ejaculation is a huge loss of sexual potential.
