PROJEKT | NEUTRINO

THE ENERGY OF THE FUTURE

A project powered by
Mikhail Gorbachev and
Holger Thorsten Schubart

EXECUTIVE SUMMARY I

VISION

- Realisation of a dream that, until now, has only been considered utopian: Using free energy by neutrinos as an inexhaustible source of energy
- This is comparable to the invention of the airplane and the first flight of the Wright brothers, both of which were supposed to have been impossible
- Through the solution of the energy problem, various other questions – e.g. the worldwide supply of food and drinkable water – will also be resolved

PHILOSOPHY

- The guiding principal is “from all and for all”
- The Neutrino Project is dedicated to the entire global population; its basic altruistic aim is to supply the world with free energy
- Through transparency and the participation of all users, a unique worldwide collective project will be initiated
- The Neutrino Project supports charity organisations and the sciences

PRODUCT

- The use of free energy by neutrinos is based on a newly-invented technology that is largely unknown in the sciences
- Through the deployment of such new technology, it is possible to convert free energy into electricity
- The product is free sustainable power that – through the deployment of neutrino technology – is usable for anyone, anytime, anywhere
- This power is completely environmentally friendly, relying neither on fossil fuels nor on nuclear energy
- To ensure the continuous development of this technology by all users and participants, the knowledge gained from its use will be made publicly and unconditionally available

PROOF of CONCEPT

- The current and voltage values of the neutrino technology have proven to be reproducible in a comprehensive series of performance tests

EXECUTIVE SUMMARY II

BUSINESS MODEL

- The name "Neutrino," along with its logo, is a registered trademark and forms the basis of business and profit
- Profit is generated from licensing fees paid by the manufacturers of products that employ neutrino technology
- Due to the variety of possible products and applications of neutrino technology, revenue and profit figures are unpredictable
- Additional profits shall be generated by certain patented inventions which will be developed in start-up companies of the Neutrino Project such as (i) the "Neutrino-Power-Cube," which enables power to be carried throughout an entire household, (ii) the "Neutrino-Wireless-Charger", (iii) the "Neutrino-Car-Battery," and (iv) the "Neutrino-Mobile-Pack"

FINANCING

- Funds provided by investors shall be invested into marketing and brand-building with the support of highly-respected, top-tier international agencies in order to compete for the neutrino technology, as well as to increase the value of the brand, with the aim to generate licensing fees
- Additionally, the start-up companies, in which the innovations of the Neutrino Project will be developed, shall be financed
- In particular, the work of the Neutrino Project's scientific partners in the fields of research and development will be financed
- Research into neutrino technology at universities will be supported as well

INVESTMENT

- Investors shall participate in the Neutrino Project through shares in (i) Neutrino, Inc., an US stock corporation or (ii) Neutrino Ventures GmbH, and thereby also participate in the innovations developed by the Neutrino Project
- The IPO of Neutrino, Inc. is envisaged in the US stock market for the financial year 2016
- In the current financing phase, investors will acquire the shares at a preferential price, and therefore may see significant increases in the value of their shares following the IPO

TECHNICAL DETAILS I

NEUTRINOS

- Neutrinos are electrically neutral, low-mass elementary particles, of which three different “generations” exist
- The name “neutrino” — according to the Italian diminutive ending “-ino” — means “little neutron”
- In interactions and reactions of neutrinos with matter — which happen only rarely — great amounts of energy can be released
- Neutrino rays pass through great thicknesses nearly unattenuated, and can even penetrate the entire earth

ENERGY USE

- Over 100 years ago, the inventor, physicist, and electrical engineer Nikola Tesla used a then-unknown cosmic radiation with properties characteristic of neutrinos — for example, enormous penetrating power — in energy technology
- Tesla radiation may therefore be considered equivalent to neutrino radiation
- The current form of free energy through neutrinos, developed with the scientific partners of the Neutrino Project, is based on an entirely new technology, heretofore unknown to science
- In simple terms, neutrino energy is harnessed and converted into electricity by means of a special foil
- The principle is essentially comparable to the use of solar cells, except that just non visible solar energy is required, working 24 hours day and night
- The special foil is coated with various metals whose exact composition and alloy is the result of decades of research, representing an established advancement in knowledge
- The current and voltage values of this new neutrino technology have proven to be reproducible in a series of scientific performance tests

TECHNICAL DETAILS II

PERFORMANCE

- Certain artificially-induced external conditions promote the performance power of the special neutrino foil enormously
- Cooperation with leading scientists from the field of nanotechnology has also been undertaken to increase the performance of the foil even further

PROJECTS

- On the basis of these findings and the demonstrated properties of the new neutrino technology, the idea of commercial use took shape
- Building on the background of free, sustainable electricity for anyone, anywhere, the Neutrino Project is now concentrating on implementing three different innovations
- These are, namely, (i) the "Neutrino-Power-Cube," (ii) the "Neutrino-Wireless-Charger," (iii) the "Neutrino-Car-Battery," and (iv) the "Neutrino-Mobile-Pack"
- The Neutrino-Power-Cube enables the independent power supply for an entire household. Thanks to the enormous penetrating power of neutrino rays, the Power Cube could be located underground, e.g. stored in a cellar or buried in a garden
- With the Neutrino-Wireless-Charger comes the long-awaited technical innovation allowing a mobile phone battery to be charged without a power supply unit
- Through the self-charging "Neutrino-Car-Battery," electric cars will be capable of driving long distances of up to 2000 km
- The Neutrino-Mobile-Pack will make mobile phone batteries unnecessary and ensure a continuous power supply
- These three inventions will revolutionise energy supply and, in the Neutrino Project's start-up companies, be developed for the market

TOGETHER. WE CHANGE HISTORY. AGAIN.
